SUMMARY

Full-Stack Engineer experienced in building scalable backend systems, AI-powered applications, and secure production-grade APIs using Node.js, Python, and React Native. Skilled in system design, event-driven architectures, RAG pipelines, vector search, and asynchronous processing with a strong focus on developing clean, responsive, and scalable web and mobile applications.

EXPERIENCE

Full-Stack Engineer

March 2024 – July 2025

Strengthverse Private Limited

- Engineered and scaled distributed Node.js/TypeScript backend systems, optimizing architecture to increase supported concurrency from under 1,000 to 3,000+ active users
- Architected high-performance services using Redis (AWS ElastiCache) and BullMQ for optimized indexing, caching, and asynchronous processing to improve throughput and latency
- Led full-stack development across React Native, Express, Docker, and AWS (EC2/S3), delivering scalable APIs and modular production-grade deployment architecture

PROJECTS

Stamin - AI Personal Health & Fitness Coaching Platform | *Node.js, Python* [GitHub Architecture](#)

- Engineered dual-backend architecture using Node.js and Python for scalable AI orchestration and ML inference
- Architected multimodal ingestion pipelines for PDF, DOCX, and image processing using OCR, CLIP, and BLIP
- Implemented preprocessing workflows with validation, metadata extraction, PII masking, and semantic chunking
- Developed asynchronous RAG pipelines using BullMQ, Redis, vector embeddings, Pinecone, and MongoDB
- Designed layered query validation with moderation, intent classification, risk scoring, and routing workflows
- Built event-driven backend services with queues and asynchronous AI task processing workflows
- Developed REST APIs for health data ingestion and personalized AI-driven guidance workflows

AskYourDoc - Offline AI Document Search Engine | *Python, FastAPI, FAISS* [GitHub](#)

- Built an offline AI document search system supporting multi-format inputs with parallel processing and watchdog-based ingestion
- Designed modular pipeline for PDF, images (OCR), PPTX, TXT, and XLS with fault-tolerant preprocessing workflows
- Implemented preprocessing with text extraction, cleaning, normalization, and sentence-level chunking with overlap
- Developed local embedding pipeline using transformer models with FAISS for efficient top-k semantic retrieval
- Ensured reliable processing with error handling, duplicate control, and hybrid in-memory plus persistent storage

Qilin - E-Commerce App | *Node.js, Express, MongoDB* [GitHub](#)

- Architected scalable Node.js backend optimizing request handling and data flow for mobile-first usage
- Built dynamic database-driven listing system reducing redundancy and improving maintainability by 40%
- Designed AI-assisted image listing pipeline with attribute inference reducing listing time by 80%
- Developed React Native frontend using Redux Toolkit for centralized state management and TypeScript for type safety

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, SQL

Frontend: React Native, React.js, Next.js, Redux Toolkit, TypeScript

Backend: Node.js, Express.js, Spring Boot, FastAPI, REST APIs, JWT, bcrypt

Databases: MongoDB, MySQL, Pinecone, FAISS

Tools & Platforms: Git/GitHub, Docker, Postman, Redis, BullMQ, AWS S3, AWS EC2

Concepts: Data Structures & Algorithms, System Design, RAG, Multimodal AI, Event-Driven Architecture

EDUCATION

Maulana Abul Kalam Azad University of Technology (MAKAUT)

Bachelor of Computer Applications (BCA)

Kolkata, India

August 2021 – July 2024

Techno India University

Master of Computer Applications (MCA)

Kolkata, India

August 2024 – June 2026
