SUMMARY

Full-Stack Engineer building scalable backend systems, AI-driven applications, and refined digital products at the intersection of technology and design. Experienced in architecting production-grade APIs, event-driven systems, RAG pipelines, and intelligent data workflows using Node.js, Python, and React Native.

EXPERIENCE

Full-Stack Engineer

March 2024 – July 2025

Strengthverse Private Limited

- Engineered and scaled distributed Node.js/TypeScript backend systems increasing supported concurrency from under 1,000 to 3,000+ active users with architecture designed for 300k users
- Architected high-performance services using Redis (AWS ElastiCache), BullMQ, optimized indexing, caching, and asynchronous processing improving backend throughput, latency, and reliability
- Led full-stack development across React Native, Express, Docker, and AWS (EC2/S3), building scalable APIs and modular production-grade deployment architecture

PROJECTS

Stamin - Personal Health Intelligence & Fitness Coaching Platform | *Node.js, Python, Flask*

- Engineered dual-backend architecture with Node.js (API/orchestration) and Python for scalable ML inference
- Developed AI health coach using NLP to analyze biometrics, activity trends, and user health data
- Implemented agentic multimodal pipeline with RAG, CLIP embeddings, BLIP captioning, and OCR for medical images
- Architected Node.js backend supporting event-driven pipelines, job queues, and AI service orchestration
- Built containerized AI services using Docker ensuring consistent deployment and isolated ML environments
- Designed REST APIs enabling real-time ingestion and synchronization of smartwatch and health data
- Used MongoDB with Mongoose ODM and vector storage for efficient hybrid (structured + semantic) retrieval

AskYourDoc - Offline AI Document Search Engine | *Python, FastAPI, FAISS*

- Built an offline AI document search system supporting multi-format inputs with parallel processing and watchdog-based ingestion
- Designed modular pipeline for PDF, images (OCR), PPTX, TXT, and XLS with fault-tolerant preprocessing workflows
- Implemented preprocessing with text extraction, cleaning, normalization, and sentence-level chunking with overlap
- Developed local embedding pipeline using transformer models with FAISS for efficient top-k semantic retrieval
- Ensured reliable processing with error handling, duplicate control, and hybrid in-memory plus persistent storage

Qilin - E-Commerce App | *Node.js, Express, MongoDB*

- Architected scalable Node.js backend optimizing request handling and data flow for mobile-first usage
- Built dynamic database-driven listing system reducing redundancy and improving maintainability by 40%
- Designed AI-assisted image listing pipeline with attribute inference reducing listing time by 80%
- Developed React Native frontend using Redux Toolkit for centralized state management and TypeScript for type safety

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, SQL

Frameworks: React Native, React.js, Next.js, Node.js, Spring Boot, FastAPI

Developer Tools: Git/GitHub, Redux Toolkit, TypeScript, JWT, bcrypt, Postman

Technologies: Express.js, Docker, REST APIs, MongoDB, MySQL, AWS S3, FAISS, Vector DBs

Concepts: Data Structures & Algorithms, System Design, RAG, Multimodal AI, Event-Driven Architecture, Client-Server Architecture

EDUCATION

Maulana Abul Kalam Azad University of Technology (MAKAUT)

Kolkata, India

Bachelor of Computer Applications (BCA)

August 2021 – July 2024

Techno India University

Kolkata, India

Master of Computer Applications (MCA)

August 2024 – June 2026
